DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over CA 2,474,651 in view of JP19810137729 (the abstract).

CA '651 teaches a hybrid cord used to reinforce rubber, said cord comprising high modulus fibers with glass fibers surrounding said high modulus fibers. CA '651 is silent in the abstract to the usage of carbon filaments. The abstract teaches hybrid yarn comprising glass fibers and carbon fibers that have been twisted in the instant claimed range. It would have been obvious to the skilled artisan to modify the teachings of CA '651 by using as the high modulus fibers carbon filaments with the reasonable expectation of obtaining a reinforcing cord for rubber having high strength.

No claims are allowed.
